About us

Founded in 1986 in the UK, Pyronix is a world-leading manufacturer of intruder prevention equipment for use in residential, commercial and industrial applications.

Pyronix' focus on engineering excellence and cutting-edge design has helped the company reach a market-leading position within the UK. The company ensures its unrelenting success by continuously introducing new products to their already extensive range, such as the award-winning Enforcer two-way wireless technology, the XD outdoor range of detectors and the PCX hybrid control panels.

Pyronix is at the forefront of the industry in introducing new platforms and software options to the market. These technologies aim to greatly enhance the experience of both the installer and user alike and started with the PyronixCloud and a whole host of IP communicators.

Being one of the foremost companies to offer an advanced user experience, with remote control of the security system from anywhere in the world, through the HomeControl+ App, Pyronix continue to add more features. HD WiFi cameras provide live video streaming and monitoring options, while wired-in programmable automation outputs enable the user to control garage doors or gates.

Pyronix continues to invest in certifying its products to the latest EN50131 standards and supporting an ambitious programme of developing the next generation of products.

In 2015, a multi-million pound investment culminated in the opening of a brand new state-of-the-art manufacturing facility in the UK. This facility maintains the company's ability to meet the ever-increasing demand for its products.

In May 2016, this privately owned company became a part of the largest supplier of surveillance equipment in the world, Hikvision. This China-based giant immediately invested in adding more resources to the Pyronix R&D team and in developing an aggressive strategy to considerably expand the Pyronix product range and strengthen its worldwide market position. One of the key elements of this strategy will be the long-established brand association with engineering excellence, high performance, innovation and accessibility.

Pyronix has always been devoted to strengthening partnerships and developing innovative ways of supplying the best possible solutions to meet their customers' needs and this is a trend that they remain firmly committed to.

[Find out more](#)

One system, two solutions

The Pyronix range of control panels offer multiple solutions for the protection of residential and small to medium commercial premises. The range consists of a wireless all-in-one control panel, the Enforcer 32WE APP, and two hybrid control panels, the PCX46S APP and PCX46L APP.

Wireless solution

The Enforcer 32WE APP is approved to EN50131 Grade 2 and is suitable for residential and small commercial installations. While the Enforcer 32WE APP starts with 32 wireless and 3 wired inputs, it can be expanded to add a further 32 wired inputs.

Hybrid solution

There are 2 variants of the PCX46 hybrid control panel:

- PCX46S APP approved to EN50131 Grade 2
- PCX46L APP approved to EN50131 Grade 3

Both panels are suitable for residential and small to medium commercial installations. These systems start with 8 wired inputs, and can be increased to a possible 46 using our wired and wireless expansion modules.

Common programming and peripherals

The control panels all share the same wired and wireless peripherals, communication modules, remote programming software and cloud applications.

The same programming menu structure and diagnostic tools provide uniformed working across the range, which maximises usability and convenience for the installer.

Enforcer two-way wireless technology

Both solutions benefit from the use of the multi-award winning Enforcer two-way wireless protocol and a whole host of wireless peripherals. This includes PIR's and dual technology detectors, transmitters, safety sensors, sirens, arming devices and detectors for outdoor protection.

Our Enforcer two-way wireless protocol has taken wireless protection to a new level; providing a truly high security, wireless solution.

Communication & app compatibility

Both solutions use the same communication options. They are also fully compatible with the great user and installer features offered by the PyronixCloud infrastructure:

- Remotely control multiple systems
- Receive both push and the new innovative voice alarm notifications
- Live streaming from up to 8 WiFi video cameras
- Fully compatible with iOS and Android devices

Remote diagnostic programs

Locally or remotely diagnose, maintain and program systems using the free UDL InSite and the PyronixCloud infrastructure.

These applications can be used via any of the IP communication modules, such as DIGI-GPRS, DIGI-LAN and DIGI-WIFI.

DIGI-GPRS & roaming SIM

The DIGI-GPRS modem supports IP and SMS communications. This modem is fully roaming and when used together with the Pyronix HomeControl roaming SIM, offers the best out-of-the-box, secure and flexible plug-and-play communication solution.

The SIM will automatically connect to the best network available and covers most European counties.

The service is activated through the PyronixCloud and includes one-year unlimited data usage when used with Pyronix control panels. It also supports SMS messaging.

ARC communications

Both solutions support Contact ID IP and SIA Level 3 IP and are capable of sending alarm events to monitoring stations.

The free Pyronix ENIP server software provides a secure link between control panels and monitoring stations.

This software must be used to receive events and can be interfaced with any modern alarm receiving software via standard automation protocols.

HomeControlSIM

PyronixCloud

HomeControl+ Cameras

Enforcer 32WE APP

HomeControl+ APP

PCX46S APP / PCX46L APP

Two-way wireless accessories

PyronixCloud.com

The PyronixCloud acts as a gateway between the Pyronix IP control panels, the HomeControl+ App and the UDL InSite software.

Fully Encrypted Communication

The connections to and from the PyronixCloud are fully encrypted to ensure all messages, including push notifications, are safely and securely transmitted.

Remote monitoring tools & account controls

The PyronixCloud provides excellent tools for installers and monitoring stations, who offer monitoring and maintenance services to their customers. The PyronixCloud infrastructure allows the account holder to add and remove app users and manage the type of push notifications sent.

Online administration software

Hosted with Amazon Web Services, utilising load balance technology and health monitoring, the PyronixCloud acts as the online administration software for connected Pyronix IP control panels.

App Customisation

With the PyronixCloud, installers can fully personalise their apps by adding their logo to the HomeControl+ App homepage. The additional branding delivers maximum brand exposure while enhancing customer experience.

See it in action

HomeControl+ App

HomeControl+ gives users unprecedented access and visibility over their home and business systems, from anywhere in the world. It allows end users to arm and disarm their system, get push notifications to their Android or iOS smart devices when events occur, receive customised notifications and check the status of each individual sensor.

The HomeControl+ App supports the innovative new voice push notification feature, which sends a voice notification directly to the user's smartphone. This ensures the user is alerted if their alarm is triggered.

HomeControl+ is compatible with the Enforcer 32WE APP and PCX46 APP panels and is available on Android and iOS devices.

HomeControl+ App

Users can download the Pyronix HomeControl+ App from the Apple App store or Google Play store and connect to their Pyronix app-enabled control panels and video cameras.

My security system

Multiple systems can be accessed through the HomeControl+ App. The user can add, delete, edit and connect to the system, change settings and view notifications.

Areas

Users can view area status in real-time and arm or disarm them from anywhere in the world. Simple locked and unlocked padlocks indicate the status, while a bell indicates if the system is in alarm.

Sensors

The user can view the status of the sensors on the system, whether they are armed or disarmed in real time, see which sensor has gone into alarm, view sensor faults or even bypass them.

Controls

The status of automation outputs can be viewed in real-time, allowing unprecedented control over a variety of appliances such as: lighting, shutters, garage doors and more.

My video

Users can check on their home from anywhere in the world, viewing their property through up to eight WiFi cameras.

SOFTWARE

Alarm monitoring and remote servicing

The Pyronix ENIP Server software acts as an IP receiver designed to interface the Pyronix IP control panels with the monitoring software of the Alarm Receiving Centre (ARC) via a standard automation protocol.

The MX-MON monitoring software provides the installer with a flexible start up alarm monitoring solution or technical remote servicing centre.

ENIP Server

The Pyronix ENIP server software is used to create an IP receiver that will act as a gateway between the Pyronix IP control panels and the Alarm Receiving Centre (ARC) monitoring software.

IP Protocol: The European TS IP protocol approved by CENELEC is used for alarm transmission CLC/ TS 50131-9: 2013 Part 9.

ATS Security Level: The IP protocol is specified to ATS level SP5.
DIGI-GPRS and DIGI-LAN: SP5-ITSEC-01/15

Encryption: All communications are encrypted to the highest standard.

Registration module

This module is used to register the Pyronix IP control panels onto the Pyronix EN IP server.

The security initial key exchange is created either automatically or manually.

Programmable polling frequency.

Automation server module

This module enables the connection of the Pyronix ENIP server to the software used by the monitoring station for managing alarms.

The IP server can output events to automation/central station management software over a serial port or LAN connection using Surgard, Ademco 685 and Silent Knight protocols.

An important factor of this system is that it manages LAN and GPRS channels.

Using the hardware suggested, the installer can connect up to 5,000 alarm control panels to a Pyronix ENIP Server if the polling frequency was set to 5min.

For a simple start up, the Pyronix IP Server can be installed on a single basic PC (laptop).

Minimum recommended requirements

Minimum hardware requirements:

- Intel or AMD 2Ghz Processor or greater
- 2GB RAM
- 100MB Hard Disk Space

Minimum requirement for the operating system:

- Microsoft Windows 7 Professional/Ultimate 32 or 64-bit (ask Pyronix for 64-bit support version if required)
- An open internet connection
- Fixed IP address on internet connection
- Administrative rights on the PC
- Microsoft SQL Server Express 2008 or later (free download from Microsoft)
- USB Port for software protection dongle

NOTE: We do not recommend Windows 8

Optional operating system requirements:

- Microsoft SQL Server 2008 or later (this is the full version, and not free)
- Microsoft Windows 7 Professional/Ultimate, 64 bit (ask Pyronix for 64 bit version of software if required)
- Microsoft Windows Server 2012
- GSM/GPRS modem for sending SMS messages, software supports Siemens TC35/MC35.
- 4GB RAM if using 64-bit or Microsoft SQL Server
- Suitable backup device such as; tape, CD/DVD Writer or USB Drive (highly desirable)
- We also recommend that the PC is used for the sole purpose of running the IP Server.
- The IP Server can be run on a virtual PC provided it has access to a USB port (in this instance the installer could run the software on multiple server hardware to limit the impact of a hardware failure).
- If the IP Server PC is behind a router/firewall then port forwarding may be required either on the router or by using port forwarding software.

MX-MON monitoring software

MX-MON is monitoring software designed for start-up Monitoring Stations (ARC), who wish to receive technical fault events. The software can be interfaced to the Pyronix ENIP software and telephone digital receivers.

- Choice of Access or SQL databases
- Networkable with an unlimited number of operators
- Flexible report creating feature
- Programmable dedicated event resolution keys from F1-F12
- Programmable levels of access for each operator
- Programmable audible alarms for each event group
- Programmable expected open/close schedule per account
- Up to 9 levels of maps per account
- Supports SK Extended, Surgard, Ademco 685 and Pyronix protocols.
- FREE upgrades
- The MX-MON software is protected by a USB dongle key

The MX-MON can be downloaded from the following link:
www.pyronix.com/download-mxmon.php

CONTROL PANELS

Enforcer and PCX46 control panels and peripherals

The all-in-one wireless Enforcer 32WE APP control panel is suitable for residential and small commercial applications and is approved to EN50131 for Grade 2 installations.

The hybrid PCX46 range of control panels are suitable for residential, small and medium commercial applications and are approved to EN50131 for Grade 2 (PCX46S APP) and 3 (PCX46L APP) installations.

Both systems are PyronixCloud and HomeControl+ App compatible; combining excellent functionality with easy installation and great diagnostic features.

The multi-award winning Enforcer two-way wireless technology delivers the convenience and ease of installation of a wireless system, without compromising on the reliability or security benefits of a wired system.

Two-way wireless technology

No mess, no fuss, simply excellent performance

The multi-award winning Enforcer two-way wireless technology delivers the convenience and ease of installation of a wireless system, without compromising on the reliability or security benefits of a wired system.

Real-time two-way device control

Each device on the system is both a transmitter and a receiver. This ensures that messages such as arming, disarming, alarm, tamper or supervision, have been received by each device on the system in real-time.

Multi-event transmission

All wireless peripherals know when the control panel is armed or disarmed. When the system is armed and an alarm is activated, the motion detectors do not disable, so that each new activation is transmitted to the ARC or user.

Prolonged battery life

When the system is disarmed all detector functions, besides two-way supervision, enter sleep mode to save battery life.

Jamming detection

Jamming detection is used to prevent accidental or deliberate attempts to disrupt the system.

Dead spot reduction with dual antennas

Dual antennas both transmit signals to help reduce 'dead spots'. This provides maximum stability of the system over a longer period of time.

Easy installation with Signal Strength Indicators (SSI)

Signal Strength Indicators (SSI) allow the installer to verify the quality of the signal received by the device, in real-time. Because the SSI is displayed on the device installation time is significantly reduced, as the installer does not have to keep referring back to the panel.

Two-way wireless keyfobs

Two-way wireless keyfobs indicate when the system is armed, disarmed or in alarm and can also control automation outputs.

Secured with 128-bit encryption

128-bit encryption provides effective protection of signals being transmitted by the system and prevents code-grabbing. This gives the wireless BUS a very high level of protection, ensuring peace of mind for both installers and users alike.

Longer range 1.6km in open space

The high sensitivity receiver allows a wireless signal range of up to 1.6km in open space, eliminating the need for repeaters and reducing installation costs.

The all in one wireless control panel

Ideal for any residential and small commercial application

Communication between the HomeControl+ App and Enforcer 32WE APP panel is encrypted to the highest standards, ensuring that sensitive information is secured and safe from accidental or malicious attacks.

A truly high security, wireless solution.

The Enforcer 32WE APP all-in-one wireless control panel takes residential security to a new level. The introduction of our Enforcer two-way wireless protocol offers a truly high security, wireless solution.

Up to 32 wireless inputs

The Enforcer control panel supports 32 wireless inputs, 4 arming stations, 32 keyfobs and 2 wireless sirens.

The extensive range of wireless peripherals available include: indoor and outdoor detectors, magnetic contacts, shock sensors, safety sensors and wireless arming devices.

Multi-event transmission

All wireless peripherals know when the control panel is armed or disarmed. When the system is armed and an alarm is activated, unlike other wireless detectors, our motion detectors do not disable immediately, so that each new activation is transmitted to the ARC or user.

Up to 32 wired inputs

The Enforcer 32WE APP also supports wired inputs including wired keypads and proximity readers. The 2 on-board inputs and 3 outputs can be expanded to a maximum of 32 wired inputs and 16 wired outputs, using the integrated RS485 bus.

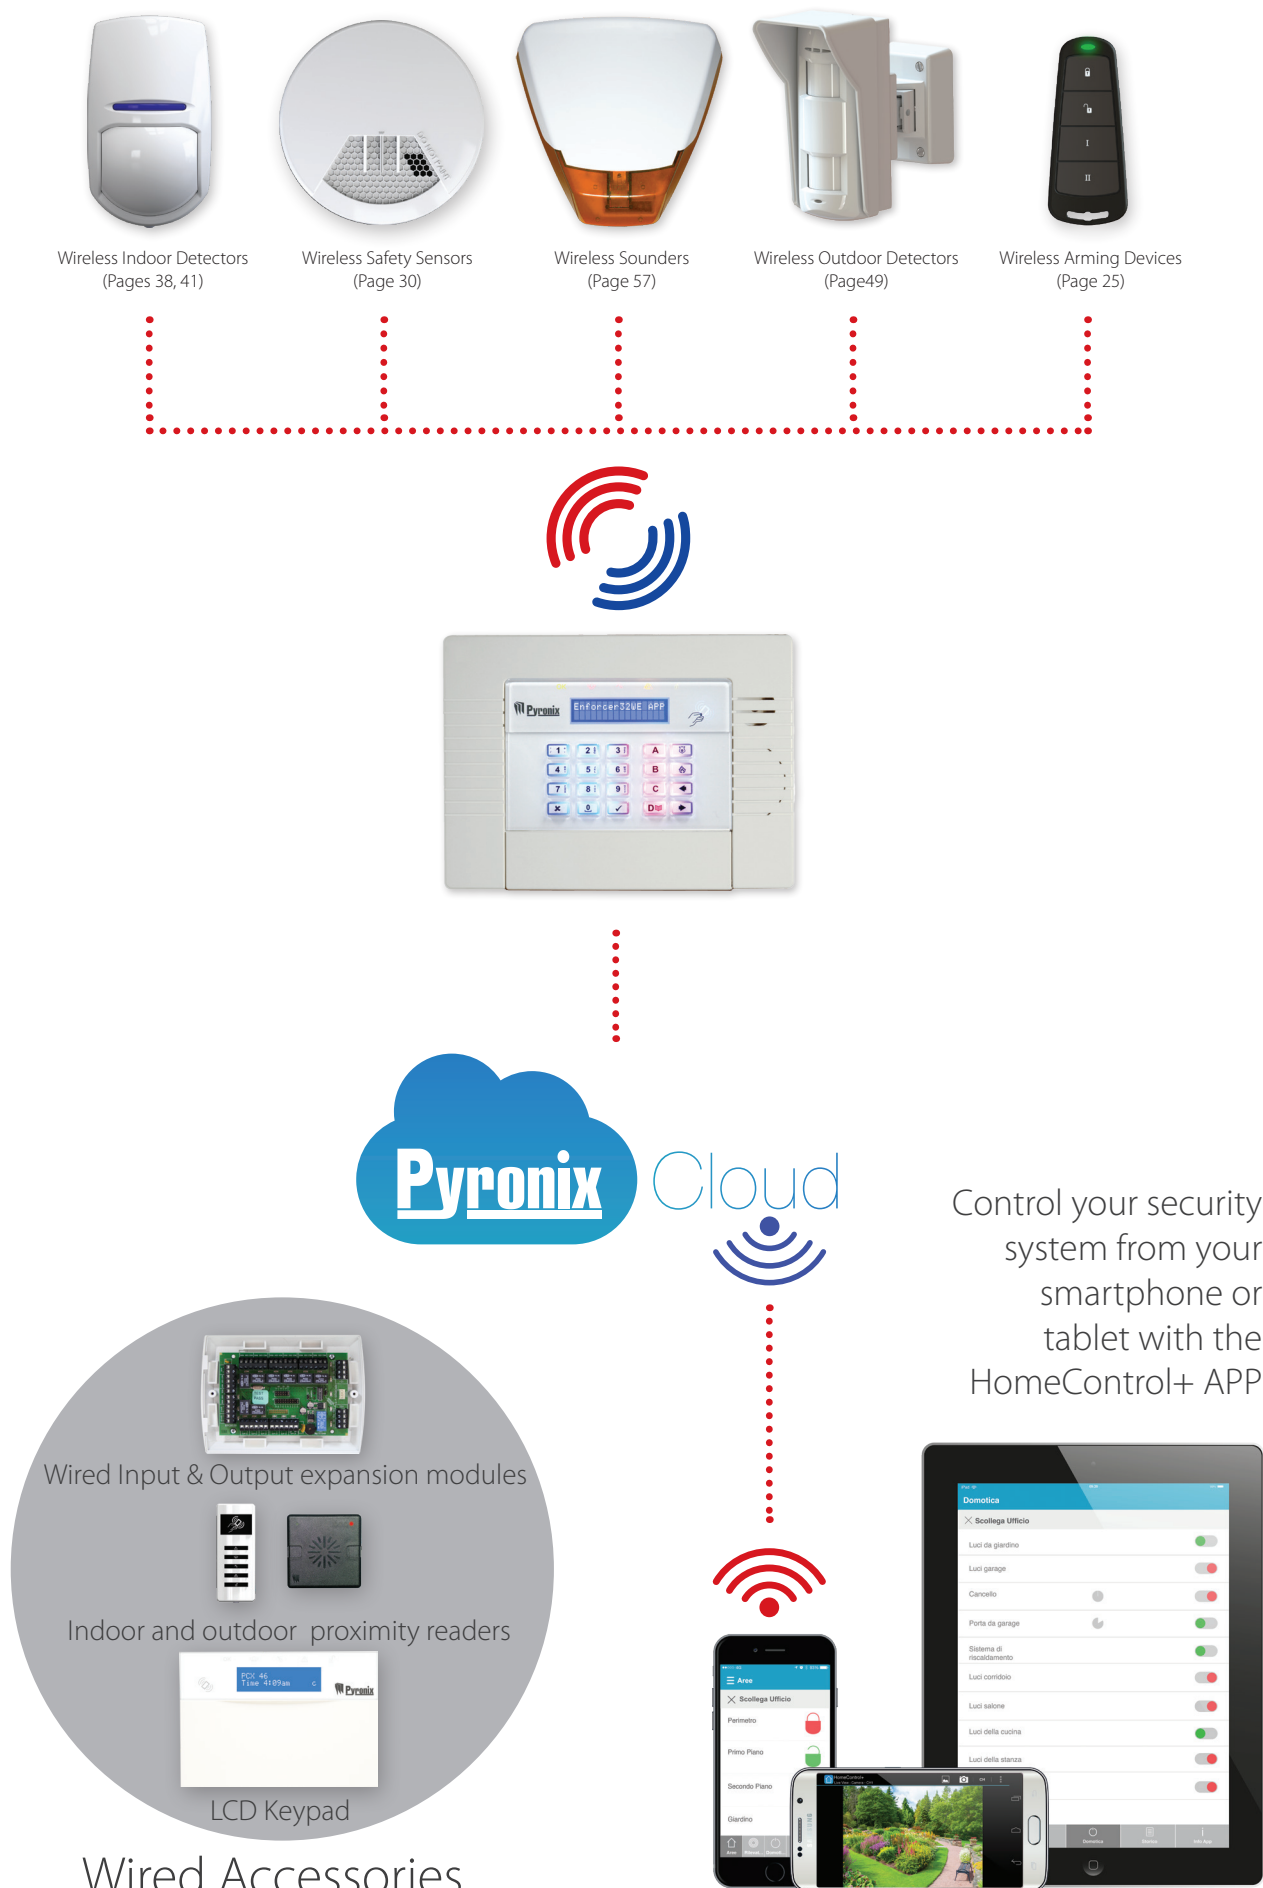

Communications, diagnostics & app compatibility

Using IP modems such as the DIGI-LAN, DIGI-WIFI or DIGI-GPRS, the Enforcer 32WE APP is fully compatible with the PyronixCloud, HomeControl+ App, ENIP server and UDL InSite software. This enables controls, ARC connections and remote diagnostics of the system.

Home Automation outputs

The Enforcer 32WE APP supports up to 19 wired automation outputs to give the user control of garage doors, gates or shutters for example. These can be controlled via the HomeControl+ App, keyfob or wired and wireless keypad.

Hybrid control panels

There are 2 control panels in the PCX46 hybrid range:

- PCX46S APP approved to EN50131 Grade 2
- PCX46L APP approved to EN50131 Grade 3

Both panels are suitable for residential, small to medium commercial installations.

Up to 46 wired and wireless peripherals

Using the wired and wireless input expanders the PCX panels can support up to 46 inputs. This provides the installer the flexibility to add additional indoor and outdoor sensors to the system.

High security Enforcer two-way wireless

The wireless expander (PCX RIX32-WE) uses the highly secure Enforcer two-way wireless protocol, which supports up to 32 wireless devices, 32 keyfobs, 4 arming stations and 2 wireless sirens. This means that installers can seamlessly add wireless indoor and outdoor detectors, shock sensors and safety sensors to the system.

Up to 46 wired inputs with triple EOL wiring capability

The wired input expanders support inertia and roller shutter sensors, as well as high end anti-masking detectors, via the triple EOL wiring capability.

Common housing for a unified look

The common housing throughout our wired and two-way wireless peripherals ensure aesthetic consistency, should the installer decide to create a hybrid system.

Communications, diagnostics & app compatibility

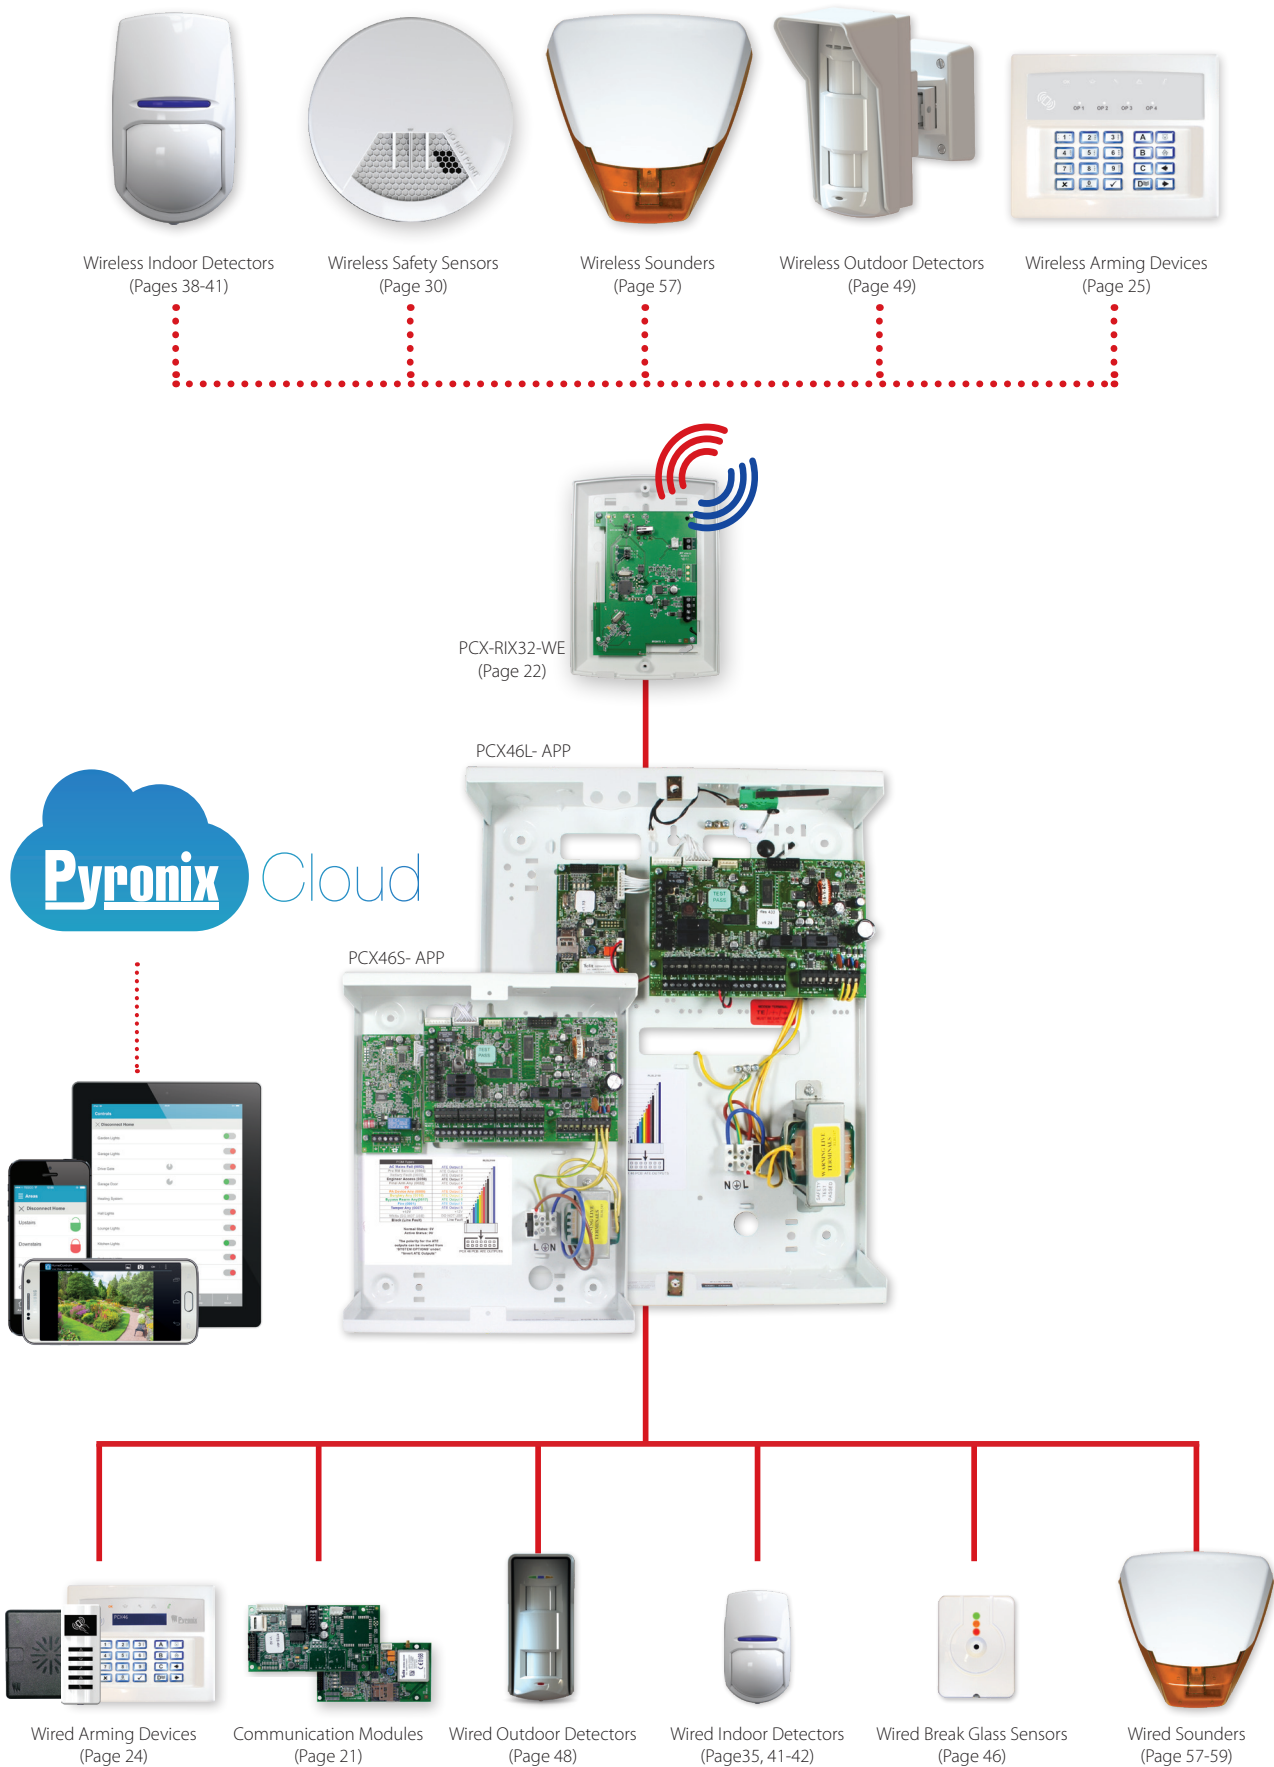

Using IP modems such as the DIGI-LAN, DIGI-WIFI or DIGI-GPRS, the PCX range is fully compatible with the PyronixCloud, HomeControl+ App, ENIP server and UDL InSite software. This enables controls, ARC connections and remote diagnostics of the system.

The PCX control panels also support the DIGI-PSTN modem, which can be used as a second path communicator.

Automation outputs

The PCX range supports up to 30 wired automation outputs to give the user control of garage doors, gates or shutters for example. These can be controlled via the HomeControl+ App, keyfob or wired and wireless keypad.

HomeControlSIM*

The HomeControlSIM is a roaming data and SMS service offered by Pyronix. Active in most of Europe** the SIM, together with the DIGI-GPRS, automatically connects to the best GPRS network available. As a result, it provides a universal and safe communication solution to users and installers alike. With unlimited data when used with Pyronix devices, the HomeControlSIM is a yearly subscription service that can also support an optional SMS service.

What are the advantages?

- The roaming service works with all operators.
- Easy to install and maintain because it is independent of the local network.
- High security connection without compromising any local network Firewall.
- One service that allows all the following at the same time:

End user: control your system remotely with the HomeControl+ App.

Installer: remote maintenance with the UDL Insite software.

Alarm Receiving Centre (ARC):

event communications to the ARC.

- Complete and total independence from the router and ADSL service.

UR2-WE universal receiver

Connect any control panel with the Enforcer two-way wireless devices

Compatible with
ANY BRAND*
of alarm control panel
(*with arm and disarm outputs)

The UR2-WE allows installers to use Enforcer two-way wireless peripherals on any brand of alarm control panel with arm and disarm outputs.

This wireless expander gives the ability to add up to 10 wireless sensors or 6 wireless keyfobs per channel, giving the install all the great benefits of the multi-award winning Enforcer two-way wireless range.

Partcode	UR2-WE
Key features	
Maximum number of inputs	2
Wireless channels	2*
Two-way wireless detectors	10 per channel
Two-way wireless keyfobs	6 per channel
Wireless peripherals dedicated fault relay	1
System ARM / DISARM input	1
Alarm indication (7 segment display)	1
Electrical specifications

WIRELESS PERIPHERALS

Enforcer two-way wireless peripherals

Enforcer two-way wireless technology is designed to ensure high security protection for users, with simple installation and maintenance for the installer.

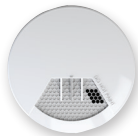

Each safety and security device is both a transmitter and a receiver. This provides real-time status readings at both the control panel and the wireless device.

The range includes a large number of peripherals that utilise our highly secure Enforcer two-way wireless technology. This allows installers to create the perfect security solution for any residential or commercial building.

* The spacer allows for the magnetic contact to be installed on an uneven or misaligned door or window frame.

Medical alert & hold up devices

The wireless HUD/MED-WE allows the user to signal for help by sounding the alarm; it's that simple.

With a wireless range of up to 300m in open space, press the centre of both buttons down for one second and the alarm is activated. Furthermore, if the system is connected to an Alarm Receiving Centre (ARC) they will be alerted immediately.

Partcode	HUD/MED-WE
Technical specifications	
Battery type	CR1 (battery included)
Battery voltage	3V
Button configuration	Pressed and held for 2 seconds
Button action	Hold up (PA) or Medical (depending on the programming)
Transmission frequency	868MHz
Transmission method	Fully encrypted rolling code
Indication	LEDs (Red, Green, Amber)
Hold-up function	✓
Temperature	Storage: -20°C to +50°C Nominal: -10°C to +50°C
Dimensions	72 x 30 x 20mm (H x W x D)
Compatible with	Enforcer PCX (using the wireless Expander) EURO (using the wireless Expander)
Inlay	Red & Green
SAP Code	361300168

Included	
WALL BRACKET	
BELT CLIP	

INDOOR DETECTORS

Wired and two-way wireless grade 2 and 3 indoor detectors

An extensive range of indoor detectors utilising the latest Pyronix patented technologies for residential, commercial and light industrial use.

The KX range of Passive Infrared Detectors (PIRs) are ideal for residential installs, delivering detection up to 30m, animal immunity up to 25kg, auto sensitivity and more. There is also the compact pet immune Colt which has an unobtrusive style or the Break-Glass detector which monitors your windows. Any combination of these can cover lounges, kitchens, bedrooms, extended corridors, bedroom areas and more.

For light industrial and commercial use there is our KX Dual Technology range. As both sensors need to be triggered to sound the alarm, these are perfect for harsher environments, such as mechanics workshops, aisles or storage facilities. The range also includes fantastic anti-blocking and anti-mask variant for Grade 3 installs.

KX indoor PIR range detectors

Blue Wave Technology

Safeguards against false alarms and improving immunity to interference through advanced signal processing and 3D optics.

Digital temperature compensation

Digital temperature compensation digitally adjusts the sensitivity of the detectors, maintaining the detectors specified range when the background temperature is near to body temperature.

Optical 3D system

Allows for better focussing of areas to improve the detection of moving targets and ensure more precise signals can be received from the PIR. The 3D system also allows protects of the area below the detector (creep zone).

Independent Floating Thresholds

IFT technology (Independent Floating Thresholds) ensures that the alarm thresholds are always kept within predetermined limits, eliminating electrical environmental disturbances.

Automatic sensitivity

The detector is able to self-adapt to changing environmental conditions, ensuring stability and intruder catch performance is maintained.

DEOL resistors

On board DEOL resistors reduce installation time. The range of values covers the majority of systems.*

3mm ABS plastics

Detector housings are consistent throughout the range of KX detectors and ensure great resistance to environmental factors to maintain consistent performance over long periods of time.

Ceiling mount technology

Combines a quad interlocking sensor and the 360 degree optical system, to provide large volumetric coverage at all installation heights up to 4m.

*Wired KX detectors only

KX Indoor dual technology detectors

Dual technology

Dual technology improves the reliability of the detectors as, to get an alarm condition, both PIR and Microwave technologies have to be activated simultaneously, thus increasing stability in hostile environments.

Blue Wave Technology

Safeguards against false alarms and improving immunity to interference through advanced signal processing and 3D optics.

Digital temperature compensation

Digital temperature compensation digitally adjusts the sensitivity of the detectors, maintaining the detectors specified range when the background temperature is near to body temperature.

Anti-cloaking technology

AND/OR anti-cloaking technology gives priority to the microwave sensor under certain conditions, such as an intruder wearing clothing with infrared cloaking properties, maintaining performance.*

Independent Floating Thresholds

IFT technology (Independent Floating Thresholds) ensures that the alarm thresholds are always kept within predetermined limits, eliminating electrical environmental disturbances.

Automatic sensitivity

The detector is able to self-adapt to changing environmental conditions, ensuring stability and intruder catch performance is maintained.

Anti-masking (anti-spray)

Adjustable anti-masking technology offers unique protection against attempts to mask the PIR or microwave and detects masking with a variety of materials, such as, cardboard, duct tape, spray, lacquer or aluminium foil.*

DEOL resistors

On board DEOL resistors reduce installation time. The range of values covers the majority of systems.*

Different microwave frequencies

Avoids interference (cross-talk) that can occur when two detectors with microwave modules in them are installed within close proximity of each other. This optimises detector stability.

Anti-blocking technology

Any attempt to block the field of view is detected. This allows the detector to send a signal to the panel to inform it that the detection area is being blocked, and must be removed before the system is set.*

*Wired dual technology KX detectors only

Breakglass detectors

Partcode

BG2000

BG16DF

Key features

Designed for most types of glass	✓	✓
Maximum range from detector to the glass	8m	8m
Angle of coverage	360°	360°
Digital technology	✓	✓
Dual confirmation detection - first impact	✓	✓
Detects the frequency of glass flexing	✓	✓
Detects the frequency of glass breaking	✓	✓
Installation Test Mode	✓	✓
Option to Latch Alarm Relay	✓	✓

Electrical specifications

Power	9-16 VDC (12 VDC nominal)
Current consumption at rest	30mA (a 13.8V)
Current consumption in alarm	28mA (a 13.8V)
Outputs relay	60 VDC, 50mA protection
Tamper terminal	12V max, 50mA max
RFI immunity from continuous wave (CW), modulated wave (AM) and pulse (PM) 80-2700MHz	10 V/m
Glass type	Float, piano, reinforced, laminated, leaded, double glazed
Glass thickness	2.4mm to 6.4mm
Glass dimensions	0.3m x 0.3m to 3m x 3m
Alarm duration	2.5 seconds
Detection speed	0.2 - 3m/s
Installation height	2.4-8m

Other details

Operating storage temperature	-10°C to + 50°C -20°C to +70°C
Weight	100g
Dimensions	90 x 90 x 30mm
Warranty	2 years

Certifications

Electrical conformity	CE	CE
SAP Code	361300110	361300077

Combination of both frequencies (Alarm)

OUTDOOR DETECTORS

Wired and two-way wireless detectors for residential and commercial protection

There are two different options within the XD range: a high mount XDH for volumetric coverage and a low mount XDL for perimeter protection.

The detectors combine 1 microwave and 2 PIR sensors to ensure maximum stability in an external environment.

The wired XD detectors also utilise high security features such as anti-masking (anti-spray) and anti-blocking technology.

For ease of use, all detectors include a walk-test buzzer to ensure they have been correctly installed. On the wireless XD detectors this can be enabled by a switch on the detector or by activating walk-test mode on the control panel.

Outdoor detector technology

XDH detectors (H - high mount)

High mount detectors are designed to be installed at 2.4m. The optics of the XDH detectors are designed to give optimum volumetric coverage of the protected area, using 78 zones, 5 planes and 85 degree coverage.

XDL detectors (L - low mount)

Low mount detectors are designed to be installed at 1.2m. The optics of the XDL detectors are designed to give optimum curtain coverage of the protected area, using 6 zones, 1 plane and 14 degree coverage.

Triple technology detection

Helping to reduce false alarms by using a tri-signal detection logic, in which the alarm is only generated when the two PIR and microwave sensors are all activated in a given period of time.

Automatic sensitivity

The detector is able to self-adapt to changing environmental conditions, ensuring stability and intruder catch performance is maintained.

Digital temperature compensation

Digitally adjusts the sensitivity of the detectors, maintaining the specified range when the background temperature is near to body temperature.

Independent Floating Thresholds

IFT technology (Independent Floating Thresholds) ensures that the alarm thresholds are always kept within predetermined limits, eliminating electrical environmental disturbances.

Anti-blocking technology

Ensures that any attempt to block the field of view is detected. This allows the detector to send a signal to the panel, informing it that the detection area is being blocked.

DEOL resistors

On board DEOL resistors reduce installation time. The range of values covers the majority of systems.

Anti-masking (anti-spray)

Adjustable anti-masking technology offers unique protection against attempts to mask the PIR or microwave and detects masking with a variety of materials, such as, cardboard, duct tape, spray, lacquer or aluminium foil.*

Different microwave frequencies

Avoids interference (cross-talk) that can occur when two detectors with microwave modules in them are installed within close proximity of each other. This optimises detector stability.

Weatherproof technologies

Ensuring the detector is not affected by adverse weather conditions. These technologies employ the use of polycarbonate housing, sealed optics, humidity protection, as well as a heavy duty ultraviolet filter.

Vegetation sway elimination

Allowing the detector to distinguish between regular movement of trees and plants with the movements of an intruder to ensure maximum false alarm protection.

*Wired XD detectors only

Two-way wireless outdoor detectors

	XD-FIXEDBRACKET	Wall bracket with rear tamper. This can be used to create 30m coverage protection of external walls. SAP Code: 361300069			

Wireless coverage patterns and features

One-push-to-learn button

Batteries

Extra power pack 2 x 3V Lithium 4700mAh

Weatherproof housing

The housing of the XD detectors is made from 3mm thick polycarbonate plastic. This provides a robust barrier to the external environment, protecting the PCB and components from the effects of adverse weather conditions. The housing is made with a UV coating which stops the yellow aging of the plastic over time. The hood provides protection to snow, rain and other environmental disturbances.

SOUNDERS

Wired and two-way wireless sounders

Provide the perfect visual and audible deterrent.

Easy to install, weather resistant and tamper proof, our outdoor sounders come with a choice of coloured bases and customisable lids, as well as backlit and strobe options to deliver a highly effective aesthetically superior look day or night.

While our indoor sounder delivers an extremely effective two tone frequency siren in the event of an alarm.

Outdoor sounder technology

The protection of a property starts with the exterior of the building and our backlit outdoor sounders deliver the perfect visual deterrent to immediately discourage any potential intruder.

Weather resistant sounders with a low power, high performance piezo delivers a loud, audible deterrent with tamper protection.

Our pioneering industry first backlit outdoor sirens provide a supreme visual deterrent.

Low power strobe

LED technology provides a visual indication when the alarm is activated.

Polycarbonate plastics

Offer a weather resistant housing with an elegant design.

Tamper protection

Ensuring the highest levels of security against accidental or malicious tampering with the system.

Low power Piezo

Low power piezo with high performance decibels provide a loud audible alarm, to ensure alarm activations are heard and acted upon.

Auto-levelling mechanism

Rotating guide holes and a built in spirit level facilitate the simple and easy positioning of the sounder during installation.

Engineer hold-off

The Sounder will disable when in 'Engineers Menu', which allows the installer to work without the fear of unwanted activations.

Customised sounders

A range of different coloured covers and bases can be chosen from, as well as screen printing corporate branding and details onto the cover, to provide year-round brand awareness.

Deltabell-WE

Being wireless, the can be fitted to the exterior of the property with no need to run wires to the control panel making it quicker and easier to fit with less mess.

Enforcer two-way wireless technology is designed to ensure high security protection for users, and simple and easy installation and maintenance for installers, utilising award winning features such as Signal Strength Indicator (SSI) and anti jamming.

128 bit encryption provides effective protection of signals being transmitted by the system and prevents code grabbing. This gives the wireless BUS a very high level of protection, ensuring peace of mind for the installer and users alike.

The high sensitivity receiver allows a wireless signal range of up to 1.6km in open space, eliminating the need for repeaters and reducing installation costs.

Twin Alert wired indoor sounder

The Twin Alert combines both a speaker and sounder in a single unit to eliminate the need for two separate products situated in different locations.

Audible notifications

The speaker element will mimic keypad tones and the sounds associated with the arming and disarming of a system enabling users to hear confirmation that it has armed correctly upon leaving the property. The volume of the tones can be adjusted to suit individual requirements.

Indoor Sounder

The indoor sounder will only activate on alarm and will override the pre-set speaker volume level to provide a siren output of 100 decibels at 1 metre. This high volume indoor siren acts as a deterrent to intruders and will also alert any inhabitants.
