

# WAVEARXPLUGIN 2.0

## KEY FEATURES

- Easy to use
- Works on Windows
- Two-way communication
- Lightweight
- Secure using SSL/TLS
- ANPR Camera support

WaveARXPlugin is a service that glues ASSA ARX access control system with Wisenet Wave VMS from Hanwha Techwin.

The plugin can be installed on either ARX or Wave server as well as on a separate machine using secure SSL/TLS protocol to communicate.

Setup rules in the user friendly configuration tool to get events from ARX to create events, bookmarks or other actions in Wisenet Wave.

The communication is two-way meaning you can also open a door from events in Wave, for example by pushing a created button in the Wave desktop or mobile app.

An ANPR module is also available for use with Hanwha ANPR cameras. The administration of plates is in ASSA ARX and you can open a door if the correct plate is in front of the camera.

## REQUIREMENTS

- PC with Windows 10
- Connection over TCP/IP to ARX and Wisenet Wave servers
- ARX need import/export license (included in Advanced and Pro in case of ANPR use)
- Wisenet Wave need no special license
