

ROHS & WEEE Directives

On behalf of GJD Manufacturing Limited, I am pleased to advise that we are in full support and fully compliant with the European Directive on the Restriction of Use of Hazardous Substances.

We have converted all of our soldering processes and circuit boards to being completely lead-free. This has had no effect on our product performance and we have absorbed the associated cost increases.

I would also like to advise that our wireless PIR detectors use a CDS photo sensor that contains minute traces of cadmium. This particular component is exempt from the exclusion process as the actual percentage of cadmium is minuscule.

All new products are designed such that they will not utilise banned components and we have found replacement approved components for the existing products, where applicable.

With respect to the WEEE directives; GJD is a registered Manufacturer with the Environment Agency. Our Producer Registration Number is WEE/GD0052TQ and we are a member of the DHL WEE Compliance Scheme.
