Simplify Video Cloud Storage and Management

ADI Cloud Storage powered by Wasabi simplifies the process for traditional systems integrators and end-users to embrace off-site cloud storage via a hybrid cloud model for video surveillance systems. We have eliminated the need for any proprietary on-premises hardware, allowing end-users to leverage their legacy hardware investment.
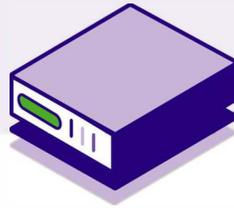

Cloud Video Storage

ADI Cloud Storage powered by Wasabi enables businesses of every size to leverage the benefits of both legacy-deployed IP surveillance systems and cloud storage. We provide multiple solutions to easily extend the capacity of your customer's existing storage based on the Video Management System.

For Video Management Systems with existing cloud connectivity, simply add a cloud storage bucket as an additional archival target within the management console.

For legacy video management systems without cloud connectivity, we offer a Windows-based software that automates the ability to offload video to the cloud based on user-defined policies.

Leverage Legacy Deployed Hardware

ADI Cloud Storage powered by Wasabi allows integrators and end-users to gradually migrate to cloud storage while at the same time leveraging legacy hardware without replacing or installing proprietary on-premises devices. All storage targets and management policies are configured locally on the NVR based on the requirements of the end-user and how much they want to replicate to cloud storage.

CapEx Cloud Storage

Offer even greater savings and cost predictability when your customer purchases a set amount of cloud storage capacity just like when purchasing hardware. With ADI Cloud Storage powered by Wasabi, cloud storage moves from OpEx to CapEx. It's ideal for organizations wishing to scale capacity while delaying costly on-premises infrastructure upgrades. By purchasing based on capacity with no hidden fees like egress or API calls, your customers can plan their budget to the penny and never go over, no matter how much video is accessed.

ADI PRO | Cloud Storage
Powered by wasabi

Validated for all major video management systems, including:*

avigilon
a Motorola Solutions Company

AXIS COMMUNICATIONS

DW DIGITAL WATCHDOG

exacq

FLIR

Genetec

Hanwha Vision

Honeywell | Commercial Security

milestone

OpenEye
The Cloud Video Platform

SALIENT

*If you don't see a brand listed, please email us at video.uk@adiglobal.com. We may have recently enabled it for cloud storage.
