Avigilon Alta Overview

Step into the future of safety and security with the Avigilon Alta
Cloud Security Suite

AVIGILON™

AVIGILON™

Step into the future of safety and security with the Avigilon Alta cloud security suite

Physical security is changing fast. Organizations are struggling to stay ahead of new safety and security challenges with their existing systems. Distributed sites and hybrid workforces mean fewer people in the office regularly, and more mobile workers. To ensure continued security, organizations need to be able to manage and respond from anywhere, and figure out how to secure spaces while still enabling easy access. Physical security and cybersecurity are becoming more intertwined, meaning a vulnerability in one can lead to a breach in the other, leading organizations to sacrifice usability in the name of security. Addressing all of these challenges is made harder by budgetary constraints and workforce shortages – organizations are continually being forced to figure out how to do more with less.

Fortunately, these complex challenges have a simple solution: the Avigilon Alta cloud security suite. Avigilon Alta is an intuitive, highly scalable and easy-to-deploy solution for safety and security. Powerful, smart, secure and agile, Avigilon Alta equips teams with tools they need for proactive security to protect people, places and property.

Why Avigilon Alta

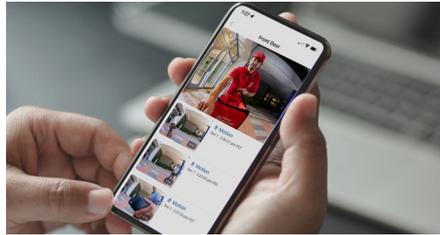

Easy to deploy and always up-to-date

Get up and running faster with a plug-and-play system that seamlessly scales. With a variety of hardware options, easy install and flexible mounting options, Avigilon Alta helps organizations ensure safety and security across all of their sites, indoors and out. The value of the cloud extends beyond deployment – with Avigilon Alta, your solution only gets better over time. Automatic software releases and over-the-air updates for hardware allow you to take advantage of new features and functionality.

Anytime, anywhere visibility for everything

The Avigilon Alta cloud security suite unifies best-in-class video and access control, and can integrate sensor data into a single platform so you can see the complete picture. Access anytime, anywhere, via the web or mobile app, so you can stay on top of what's happening regardless of where your teams are.

Smart tools to react and respond faster

An intelligent rules engine provides teams with powerful alerting, alarms and workflow management. Get notified of suspicious access events, loitering, anomalies and more. Quickly view relevant details, including video, access events or sensor data. Use talk down speakers, trigger a sitewide lockdown, or take other actions to get the situation under control.

Intelligently designed to optimize and automate

Physical security isn't just about keeping people out – it's also seeing what is happening around your facilities, knowing who is there, and enabling easy access for authorized users. Avigilon Alta has tools to help understand and manage occupancy, including muster reports, real-time people and vehicle counts, and smart maps to visualize hot spots or high-traffic areas. Manage access for employees and visitors with secure, mobile credentials, and enable easy guest access with video intercoms and QR-code virtual directories.

Trusted and secure

Don't let physical security be a security risk. Motorola is a trusted leader in safety and security, so organizations can rest assured that their solution will be there for them in the moments that matter most. Avigilon Alta takes a secure-by-default approach, eliminating preconfigured usernames and passwords, implementing end-to-end encryption, building in hardware security to prevent tampering, and including automatic, over-the-air updates to keep your system secure and your organizations safer.

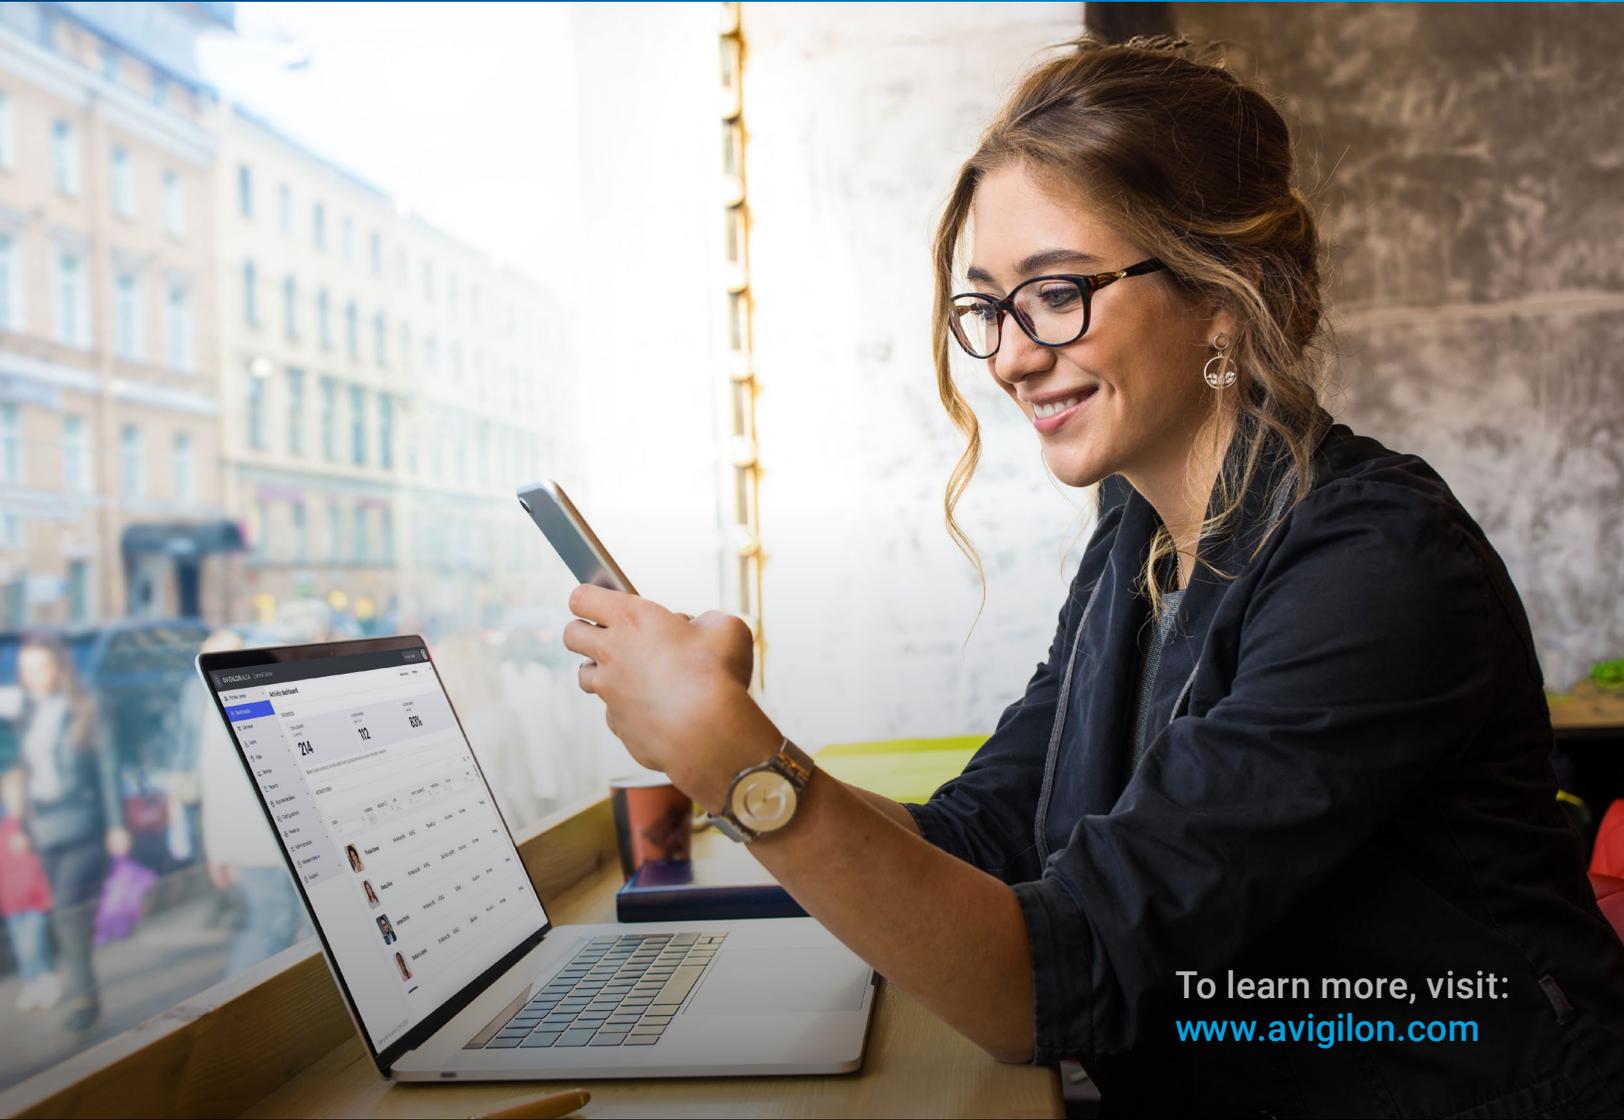

Extensible security on an open platform

Cloud security doesn't have to mean locked-in, or require a complete rip and replace. Leverage your existing cameras and readers with Avigilon Alta for a seamless transition to cloud. Open APIs, ONVIF support and tech partner integrations extend your system capabilities, ensuring you can address your safety and security needs today, and into the future, while protecting your hardware investment.

Part of something bigger

Avigilon Alta integrates the broader Motorola Solutions safety technology ecosystem through Orchestrate, included at no additional cost. It's the only ecosystem that integrates video, access control, voice, data and more to offer seamless workflow automations to improve processes, speed response time and enhance safety and security.
